SHILPI

shilpydwivedi21@gmail.com | Budaun, Uttar Pradesh | linkedin.com/in/shilpi-dwivedi-6a5a37375 | github.com/Shilpy68-code

CAREER OBJECTIVE

Motivated BCA graduate (2026) with a strong foundation in web development (HTML, CSS, JavaScript, React.js) and programming (Java, DSA, SQL). Built and deployed 4 live projects, including a REST API based recipe app. Seeking an entry-level Web Developer role to contribute to the team and grow through real-world projects.

EDUCATION

Bachelor of Computer Applications (BCA)

Budaun Institute of Management and Technology | MJPRU, Bareilly | 2026

TECHNICAL SKILLS

Languages & Technologies

- **HTML5 & CSS3 —** Semantic markup, Flexbox, Grid, responsive design, cross-browser compatibility
- **JavaScript (ES6+) —** DOM manipulation, event handling, fetch API, local storage
- **React.js —** Component-based UI development, hooks, state management, props
- **Java —** OOP concepts, core Java programming
- **DSA with Java —** Data structures & algorithms, problem solving
- **SQL / MySQL —** Database design, CRUD operations, queries

Tools & Platforms

- **Git & GitHub —** Version control, repository management, project hosting
- VS Code, Chrome DevTools
- **Responsive Web Design —** Mobile-first approach

PROJECTS

Smart Makeup Price Comparator | HTML | CSS | JavaScript

A web application that allows users to compare makeup product prices across platforms, helping shoppers make informed purchasing decisions.

- Built a dynamic product comparison interface using JavaScript with real-time filtering and search functionality
- Designed a clean, responsive UI with CSS Grid/Flexbox for optimal viewing across devices
- Demonstrates understanding of DOM manipulation and data-driven UI development

Recipe Wallah (Recipe Finder) | HTML | CSS | JavaScript | REST API

A responsive recipe search web app that lets users find meals by name, discover random recipes, and view full cooking details using live data from TheMealDB API.

- Integrated TheMealDB REST API using Fetch and async/await to search recipes, get random recipes, and load full recipe details
- Built a modal popup showing ingredients with measurements, instructions, category, cuisine, and YouTube/source links
- Used event delegation and dynamic DOM rendering to generate recipe cards, with loading, error, and empty-result states

Front-End Clone Projects (Nykaa & Amazon India) | HTML | CSS

Pixel-perfect front-end replicas of the Nykaa and Amazon India websites, recreating real e-commerce layouts and navigation.

- Reproduced multi-section layouts including header/navbar, search bar, hero banner, category sections, product grids, and footer
- Applied CSS Flexbox, Grid, hover animations, and custom styling for consistent visual alignment
- Ensured fully responsive design across mobile, tablet, and desktop viewports
